

"We're still trying to figure out how granite made itself."

"I just don't understand this. The theory says it stopped at the Conrad line, but the deeper we go, the more granite there is."

"Don't tell the students about the *alpha recoil* technique, and then it will be easier to say that Gentry is wrong."

"What a problem is on our hands! There are trillions of those Po-218 halos out there! They're in the granite everywhere!"

"We have a scientific breakthrough! Dr. Kukulorff has devised a way to erase Po-218 halos! He uses a blowtorch."

"We'll just pretend they don't exist. We've applied that technique to so many other objections to the theory."
