

"I think Harwitt should mind his own business."

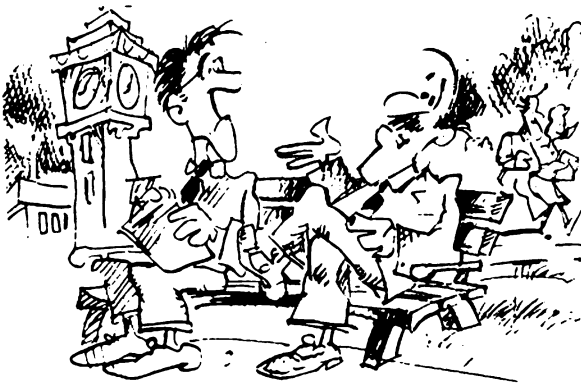

"On behalf of the theory I will have to say, it would be easier if I could tell you that globular clusters, ellipticals, and spiral galaxies didn't exist."

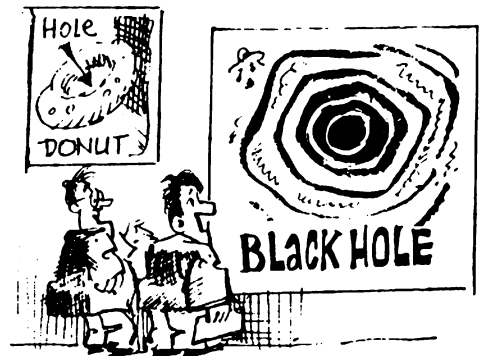

"I have developed a new theory on how to get rid of foggy nights. Just push it together and make stars!"

"Oh, this is terrible! 97% of the universe is missing! What shall I ever do! How could the theory have misled that much of it!"

"I am sorry to have to tell you, but planets and stars do not rotate after all. It just doesn't fit into the theory."

"I sure am thankful for black holes. Maybe we can also use them to explain away parallel galaxies, disk-shaped galaxies, spiral arms, globular clusters, and other things that don't fit the theory."
