

LIFE ONLY FROM LIFE

LIFE COMES ONLY FROM LIFE—Vegetation is placed in an open container. Seeds within the vegetation sprout. Living creatures have access to it, so they come, feed, and reproduce their young. Life continues on, but it did not originate within this jar.

NON-LIFE CANNOT PRODUCE LIFE—Food is placed in a closed container and then heated sufficiently to kill all living organisms and their seeds. It is kept closed and no life originates within it or within the atmosphere surrounding it. Life will not originate within this jar, and if it appears to, the cause will have been insufficient initial heat to kill all life spores (mold, etc.) brought in from outside.
