

The Amazing Reptiles

The upside down
 GECKO LIZZARD - How does he do
 it? - FROM 500 MILLION MICRO-
 SCOPIC SUCTION CUPS - OF COURSE!

A TOAD CAN GO A FULL YEAR
 WITHOUT FOOD!

AS THE ALLEGATOR'S
 EGGS ARE VERY
 HARD AND TOUGH -
 THE BABIES, HOWEVER,
 ARE TEMPORARILY EQUIPPED WITH
 SPIKES ON THEIR NOSES WHICH
 FACILITATE A BREAK THROUGH ~

THE MALE SECHEL'S FROG
 EXUDES A LIQUID GOO ONTO
 HIS BACK WHICH HE USES AS
 A SORT OF PACK-SACK IN
 WHICH HE CARRIES HIS OFF-
 SPRING UNTIL THEY ARE READY
 TO FEND FOR THEMSELVES ~

Snake eyes are different
 FROM THE EYES OF ANY OTHER
 CREATURE AMONG THE REPTILES
 OR VERTEBRATES - THE WHOLE
 LENS IS SHIFTED FORWARD OR
 BACKWARD TO FOCUS - THIS IS
 A TOTALLY NEW INVENTION"
 WHICH FACT DRIVES EVO-
 LUTIONISTS TO DISTRACTION -
 IT SIMPLY DOES NOT FIT THEIR
 THEORY!

When TURTLES ARE
 ABOVE WATER
 THEY USE A REGULAR
 SET OF LUNGS
 BUT THEY ALSO
 HAVE SPECIAL
 WATER SACS AT
 THE REAR OF
 THEIR BODIES
 WHICH ARE USED WHEN
 THE TURTLES ARE UNDER WATER.
